CARDIOVIT AT-180

Renowned SCHILLER technology in the state-of-the-art electrocardiograph CARDIOVIT AT-180:

- ⚡ High efficiency in any environment – ECG acquisition with only three clicks
- ⚡ Cybersecurity
- ⚡ Advanced clinical tools

Create a 10 seconds resting ECG from a resting rhythm recording of up to 20 minutes with ECG Framer

HIGH EFFICIENCY IN ANY ENVIRONMENT

From the emergency department to the cardiology clinic, efficiency and quality are essential. ECG acquisition has never been faster: Enter or download patient data with PDQ or worklist, acquire the ECG, print and transmit with only three clicks.

EASY 1-2-3 STEPS

1. Enter or download patient data. No mistakes with barcode and PDQ function.
2. Check signal quality and possible lead reversal before acquisition.
3. Review ECG, edit measurements and write the report before exporting or printing.

ECG FRAMER: Save time and avoid repeating ECGs. Let the patient relax and capture the best-quality ECG or multiple ECGs for patient observation over a 20-minute span. Measurements and interpretation are automatically generated for all ECGs. The continuous 12-lead ECG recordings and all captured ECGs are stored locally and transmitted to SEMA, SCHILLER's data management system.

CYBERSECURITY

Bidirectional communication with EMR and HIS systems is available for all recording types. Data integrity and protection are supported with enhanced security features:

- ⚡ Configurable access control with user name, password and privileges to prevent unauthorized access
- ⚡ Wi-Fi protocols including certificate-based authentication to ensure secure access to the hospital IT infrastructure
- ⚡ Data encrypted during transmission

ADVANCED CLINICAL TOOLS

16-LEAD ECG: The 16-lead resting ECG analysis (using a 14-wire patient cable) takes advantage of a right chest and back electrode to provide extended results for chest pain in adults.

SAECG: The analysis of late ventricular potentials in the ECG identifies post-MI patients predisposed to ventricular tachyarrhythmias and possible sudden cardiac death.

VECTOR ECG: 3-dimensional view of the cardiac electrical activity and complete diagnosis of frontal and posterior walls.

ETM SPORT: The first automated ECG interpretation module designed for athletes, based on the latest Seattle Criteria.

Hook-up adviser with anatomical model (rotate and zoom-in function) along with colour-coded waveforms

18.5" touchscreen for full ECG review

High-resolution A4 thermal printer

Lead reversal detection before ECG acquisition

New, intuitive SCHILLER user interface

Highly hygienic keyboard with a durable, replaceable cover keeping dust, dirt and liquids out

Smooth-gliding wheels and solid trolley with bin to store accessories

EXERCISE ECG

Advanced exercise program with great flexibility in protocol definition for ergometers and treadmills. Print your customised report with the high-resolution thermal printer. Full-disclosure data enables review and re-analysis of every beat and arrhythmias for enhanced clinical confidence.
